

# State-of-the-Art Siren System Placed in Service for Limerick Generating Station

## *Changes to Monthly Siren Tests Effective July 2nd*

Exelon has implemented a new state-of-the-art siren system within Limerick Generating Station's 10-mile Emergency Planning Zone (EPZ). The 165 new outdoor warning sirens incorporate a battery powered backup system and an upgraded communication system that enable full functionality in the event of an electrical power outage.

### **Testing for Your Safety**

The three-minute, full volume test will now be conducted twice a year on the **first Monday of June and December at 2 p.m.**

Beginning in July, other monthly testing will consist of a short 'growl.' Residents in the 10-mile EPZ should expect to

hear a 20-30 second, reduced volume test. This test will remain scheduled for 2 p.m. on the first Monday of each month.

Residents should contact their county at the following numbers if they have any siren concerns:

**Berks County (610) 374-4800**

**Chester County (610) 344-5000**

**Montgomery County (610) 631-6530**

The warning sirens are one of several methods used by county emergency management authorities to provide notification of emergencies. Individual counties may activate the sirens to warn the surrounding community of any emergency condition.

**The sirens are not a signal to evacuate. In an actual emergency, residents should tune to one of the county Emergency Alert System radio or television stations for further information.**
